The method may be used for genotyping an CC alpha2B, alpha2A or alpha2C receptor gene and further used to determine CC whether an individual is at increased risk of developing a disease CC associated with alpha2B, alpha2A or alpha2, comprising detecting a CC polymorphic site which correlate to disease schected from cardiovascular CC disease, central nervous system disease schected from cardiovascular CC addition, the technique may be used to predict an individual's response CC to an alpha2B, alpha2A, or alpha2C agonist (e.g. epinephrine, clonidine, oxymetazoline, guanabenz, UK14304, BHT933 and CC combinations of these) or antagonist (e.g. yohimbine, prazosin, ARC 239, CC these) by detecting the polymorphic site and correlated to adenylyl CC cyclase, MAP kinase activity, phosphorylation or inositol phosphate CC levels). The present sequence is that of the third intracellular loop of CC the human alpha-2BAR variant protein, the sequence is deleted for the 3 cardiovascular (AAM52117).

                                                                                                                                                                                                                                                                                                                                           protein. Alpha2B-AR has a glutamic acid repeat element (amino acids 298-309) of 12 glutamates, in an acidic stretch of 18 amino acids (amino acids 294-311), located in the third intracellular loop of the receptor polypeptide. The variant is obtained by deletion of three glutamates from the Glu repeat (amino acids 307-309). Alpha2B-AR gene is located on chromosome 2. Alpha2-AR mediate many of the physiological effects of the catecholamines, norepinephrine and epinephrine. An antagonist of alpha2B-adrenoceptor is useful for treating a mammal suffering from vascular contraction of coronary arteries and a disease involving vascular contraction of coronary arteries which is clinically expressed as coronary heat disease (CHD), unstable chronic angina pectoris which is clinically expressed as Prinzmetal's variant form or acute myocardial infarction (AMI). Alpha2B-AR gene is used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Snapir A,

                                                                                                                                                                           Sequence
                                                                                                                                                                                                 The invention relates to a method for detecting a risk of hypertension by determining the pattern of alleles encoding a variant alpha-2B-adrenoceptor (AR) protein. The methods and compositions of the invention are useful for detecting risks and targeting treatment for hypertension. The kit is also useful for selecting for clinical drug trials testing the antihypertensive effect of compounds. The present sequence is human
                                                                                                                                                                                              alpha-2B-adrenoceptor variant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    문
  Human alpha-2B adrenergic receptor (AAW11804) is a member of the rhodopsin-like signal transducer family. Its amino acid sequence was deduced from a genomic DNA clone (AAT59499) obtd. from a hume spleen DNA library. Vectors have been adapted to allow prodn. of
                                                                                                                                                                                                                                    WPI; 1997-107576/10.

The receptor proteins were used to design polypeptides, pref. based on the transmembrane domains, for use in G-protein coupled receptor ligand binding assays. The polypeptide fragments retain biological activity such as binding a GPR ligand or modulating GPR ligand binding to a GPR (see AAR48759-R48758, AAR50569-R50807 and AAR89189-R89195 for examples of polypeptide fragments). The polypeptide fragments can be used in compositions for treating subjects suffering from a pathology related to a GPR abnormality e.g. a psychotic disorder such as schizophrenia.
 G-protein coupled receptor; ligand binding assay; transmembrane domain;
                                 G-protein coupled human alpha-2 C2 adrenergic receptor.

The receptor proteins were used to design polypeptides, pref. based on the transmembrane domains, for use in G-protein coupled receptor ligand binding assays. The polypeptide fragments retain biological activity such as binding a GPR ligand or modulating GPR ligand binding to a GPR (see AAW02747-W0299) for examples of polypeptide fragments). The polypeptide fragments can be used in compositions for treating subjects suffering such as schizophrenia.

CC The invention relates to genotyping an alpha-2B, 2A, or 2C adrenergic CC receptor gene (I)-(III) by detecting a polymorphic site, comprising; CC (a) obtaining a sample having a polymucleotide encoding an alpha-2B, CC alpha2A or alpha2C or fragment or complement of; and CC (b) detecting a polymorphic site comprising nucleotide positions 901-909 CC of (I), a site comprising cytosine or guanine at position 753 of (IIV) CC or a site comprising (A) (ggggggggccg) or (B) (gggggggtggg) at CC alpha2B, alpha2A or alpha2C receptor gene and further used to determine CC whether an individual is at increased risk of developing a disease CC associated with alpha2B, alpha2A or alpha2, comprising detecting a CC polymorphic site which correlate to disease selected from cardiovascular CC disease, central nervous system disease and combinations of these. In CC addition, the technique may be used to predict an individual's response CC norepinephrine, clonidine, oxymetascilne, guanabanz, UK14304, BHT933 and CC combinations of these) or antagonist (e.g. pinephrine, prazosin, ARC 239, CT anwolscine, idazoxan, tolazoline, phentolamine and combinations of these or antagonist (e.g. yohimbine, prazosin, ARC 239, CC cyclase, MAP kinase activity, phosphorylation or inositol phosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ð

CC of (I), a site comprising cytosine or guanine at position 73 of (IIV)

CC of (I), a site comprising cytosine or guanine at position 73 of (IIV)

CC or a site comprising (A) (gyggggggcg) or (B) (gygggggtgag) at CC positions 961-972 of (III). The method may be used for genotyping an CC alpha2B, alpha2A or alpha2C receptor gene and further used to determine CC whether an individual is at increased risk of developing a disease CC associated with alpha2B, alpha2A or alpha2, comprising detecting a CC polymorphic site which correlate to disease selected from cardiovascular CC disease, central nervous system disease and combinations of these. In CC disease, central nervous system disease and combinations of these. In CC combinations, clonidine, oxymetazoline, guanabenz, UK14304, BHT933 and CC combinations of these) or antagonist (e.g. epinephrine, contral the contral capture, guanabenz, UK14304, BHT933 and CC combinations of these) or antagonist (e.g. yohimbine, prazosin, ARC 239, CC rauwolscine, idazoxan, tolazoline, phentolamine and combinations of these) by detecting the polymorphic site and correlating the site to a correlating the contral response (where the response is correlated to adenylyl CC cyclase, MAP kinase activity, phosphorplation or inositol phosphate CC levels). The present sequence is that of the human alpha-2AAR protein.
                                                                                                                                                                                                                                                                                                                               밁

                                               The present invention describes antigenic peptides (1) comprising:

CC (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino CC (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino CC (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino CC (a) any one of a particular CC (a) any of a particular (GPCR) or a candidate polypeptide in a sample; CC and (2) an isolated antibody having high specificity and high affinity CC (a) any otherways. The antigenic peptides for GPCRs are useful in detecting CC an intibodies. The peptides and antibodies are useful for detecting the CC antibodies. The peptides and antibodies are useful for detecting the CC presence or absence of corresponding GPCRs. The antigenic peptides for CC gPCRs and antibodies are useful for diagnosing and designing drugs for CC treating immune-related diseases, from the related disease, cell proliferative CC diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, CC diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, CC atherosclerosis, bacterial, fungal, protozoan or viral infections, CC anxiety, depression, schizophrenia, dementia, mental retardation, memory CC anxiety, depression, schizophrenia, dementia, mental retardation, memory CC anxiety, depression, schizophrenia, dementia, mental retardation, wemory consisting of the present involved. The antibodies may be CC consisted in immunoassays and immunodiagnosis. ABZ42523 to ABZ42669 encode cxemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            G protein-coupled receptor; GPCR; antigenic peptide; gene therapy; G protein-coupled receptor modulator; antibody; immune-related disease; GPCR; antibody; immune-related disease; and is growth-related disease; cell regeneration-related disease; AIDS; cancer; immunological-related cell proliferative disease; autoimmune disease; Alzeiner's disease; atteroscierosis; infection; osteoparthritis; allergy; osteoporosis; cardiomyopathy; inflammation; Crohn's disease; diabetes; graft versus host disease; Parkinson's disease; multiple sclerosis; pain; psoriasis; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; obesity; nausea; hypertension; hypotension; renal disorder; rheumatoid arthritis; trauma; hypertension; hypotension; renal disorder; rheumatoid arthritis;

```
CC (b) detecting a polymorphic site comprising nuclectide positions 901-909 CC of (I), a site comprising cytosine or guanine at position 753 of (IIV) CC or a site comprising (A) (ggggcggggcg) or (B) (ggggcggtggg) at CC positions 961-972 of (III). The method may be used for genotyping an CC alpha2B, alpha2A or alpha2C receptor gene and further used to determine CC whether an individual is at increased risk of developing a disease CC associated with alpha2B, alpha2A or alpha2, comprising detecting a CC polymorphic site which correlate to disease selected from cardiovascular CC disease, central nervous system disease and combinations of these. In CC addition, the technique may be used to predict an individual s response to an alpha2B, alpha2A, or alpha2C agonist (e.g. epinephrine, CC norepinephrine, clonidine, oxymetazoline, guanabenz, UK14304, BHT933 and CC combinations of these) or antagonist (e.g. yohimbine, prazosin, ARC 239, CC rauwolscine, idazoxan, tolazoline, phentolamine and combinations of these) by detecting the polymorphic site and correlating the site to a CC predetermined response (where the response is correlating the site to a CC cyclase, MAP kinase activity, phosphorylation or inositol phosphate CC levels). The present sequence is that of the human alpha-2CAR variant CC protein, deleted for a 4 amino acid polymorphic site at residues 321-324 of the wildtype protein (AAM52124).
